Edwin Alvarado, Kala Hayes, Anashrah Adil, Zain Ahmed

Class: 6263-ITAI-1371 Intro to Machine Learning-S10-12321

Edwin Alvarado:

For this lab, I focused on testing, validation, and quality control. I reviewed and debugged the codebase to ensure execution was error-free, double-checked the calculations and performance metrics, and verified that the visual outputs accurately reflected our results. I also assisted in cross-referencing our findings against the lab requirements.

Kala Hayes

For this assignment, I kept the team informed about the requirements and deadlines to help ensure everyone could contribute. I reviewed the code to ensure it ran correctly and produced no errors. Once everyone finished their contributions, I created the GitHub repository, organized the folder, and submitted to Canvas

Anashrah Adil

I contributed to the development and evaluation of machine learning models for flower classification by building and comparing a single Decision Tree against a Random Forest ensemble using scikit-learn. I trained both classifiers on the Iris dataset, evaluated their predictive performance using accuracy metrics, and extracted and visualized feature importances to determine the most critical botanical attributes for classification.

Zain Ahmed:

For this lab, I reviewed the model fits and feature importance figures to ensure all axes, labels, and legends were formatted consistently across the team's work. I then refined the narrative connecting the baseline data split to the final Random Forest results,

ensuring our written conclusions directly aligned with the code outputs and met all lab rubric requirements.
